

Personal Statement

I am a Fullstack Engineer / Frontend specialist with over 5 years of experience. I build high-performance, production-grade web applications, from pixel-perfect frontends to the APIs and data layers underneath them. Specializing in Next, TypeScript, Node, React and with deep expertise in WordPress/Elementor solutions. I craft high performance web apps and pixel-perfect UIs that drive business growth.

I'm also proficient in creating Salesforce marketing cloud personalization Solutions. I am always open to adopting other frameworks, languages, and libraries. I have a strong focus on creating seamless user interfaces from concept to deployment, incorporating proactive feature optimization while leveraging modern technologies. I am passionate about aesthetics, UX/UI design, and delivering intuitive, high-performing digital experiences.

Skills

- Great team player with excellent communication and organizational skills
- Detail-oriented problem solver
- Creative with an eye for design.

Experience

Senior Frontend Engineer

Freelance (Upwork)

Aug 2021 – Present

- Delivered 18+ freelance engagements across React, Next.js, TypeScript, and WordPress stacks, maintaining a 100% Job Success Score and Top Rated status over 2,500+ billed hours.
- Refactored a React-based device management platform, migrating the build system from Webpack to Vite, eliminating infinite re-render loops, and adding Chart.js visualizations to stabilize the UI and improve load performance.
- Built a Firebase keypair provisioning service and GitHub Actions CI pipeline to support HID/CAN hardware device integrations for a connected-device web app.
- Implemented TOTP-based two-factor verification flows for high-value transactions (adding beneficiaries, sending payments) on a corporate banking platform, using React, TypeScript, and Mantine.
- Built Salesforce Marketing Cloud Personalization integrations to convert web analytics into targeted, real-time on-site personalization for e-commerce clients.
- Led an AI-assisted multi-agent development workflow (Claude Code) to scaffold, build, and deploy a headless WordPress + Next.js site end-to-end, shipping a 98 Lighthouse performance score.
- Built a print/export pipeline (react-to-print) for a student assessment platform, fixing data-rendering bugs and creating a formatted, paginated print stylesheet for PDF results.
- Delivered 6+ WordPress/Elementor sites using ACF, CPT-UI, Pods, and Polylang for full client-side content control, including a bilingual English/French build for a Canadian pharmaceutical distributor.
- Built a real-time broadcast overlay (WebSockets, SVG) for a live YouTube stream, syncing live market data feeds with a CNBC-style ticker design.

Frontend Engineer

Primealert

March 2019 – May 2021

- Built and shipped user-facing features in React.js, extracting reusable components into a shared front-end library that cut duplicate code across future projects.
- Owned front-end architecture decisions that translated UI/UX concepts into pixel-accurate, production-ready interfaces.
- Partnered with product managers and designers to scope and ship original solutions on tight timelines, reducing back-and-forth on feature handoffs.
- Diagnosed and resolved interface bugs and performance bottlenecks, improving application stability across releases.
- Maintained technical documentation for application changes and fed market/competitive research into feature planning.

Software Engineer

CBTech

June 2018 – February 2019

- Built single-page applications and mobile-first responsive sites using JavaScript, HTML, CSS, and Bootstrap.
- Developed reusable front-end components in close collaboration with backend engineers and designers, speeding up feature delivery.
- Shipped new web and mobile-facing features from requirements through deployment.
